Problem 1

Parts (a) and (b)
The plots for Parts (a) and (b) are shown in Fig. 1.

![Plot](image1.png)

Figure 1: Problem 1. Parts (a) and (b)

Part (c)
The real and imaginary parts are shown in Fig. 2. It can be seen from the figure that both real and imaginary parts decay exponentially.

![Plot](image2.png)

Figure 2: Problem 1. Part (c)

Part (d)
The function $f(z)$ is shown in Fig. 3.

Problem 2
The signal $x_M[n]$ for $M = 4, 5, 7, 10$ is shown in the plots in Figs. 4, 5, 6, and 7 respectively. The fundamental period ($N$) for each
signal is,

\[ N = 3(x_4[n]) \]
\[ N = 12(x_5[n]) \]
\[ N = 12(x_7[n]) \]
\[ N = 6(x_{10}[n]) \]

Consider the condition for periodicity,

\[
\sin\left(\frac{2\pi M(n + k)}{N}\right) = \sin\left(\frac{2\pi Mn}{N}\right)
\]
\[
\sin\left(\frac{2\pi Mn}{N}\right) + \frac{2\pi Mk}{N} = \sin\left(\frac{2\pi Mn}{N} + 2\pi k_1\right)
\]

hence we must have,

\[
\frac{kM}{N} = k_1
\]

(1)

i.e. \( \frac{kM}{N} \) must be an integer.

We first consider \( M < N \). Now if \( M \) and \( N \) are relatively prime then \( k = N \) satisfies the condition in (1). If \( M \) and \( N \) are not relatively prime then express \( M \) and \( N \) as a product of prime factors,

\[
\frac{kM}{N} = \frac{p_1^{a_1} p_2^{a_2} \cdots p_r^{a_r}}{p_1^{b_1} p_2^{b_2} \cdots p_s^{b_s}}
\]
canceling common factors,

\[
\frac{kM}{N} = \frac{M_1}{N_1} \quad \text{(say)}
\]

where \( M_1 \) and \( N_1 \) are relatively prime. Then \( k = N_1 \).

Let us take the case of \( M = 4 \) and \( N = 12 \). Now \( \frac{M}{N} = \frac{4}{12} = \frac{1}{3} \) and hence \( k = 3 \). For \( M = 5 \) and \( N = 12 \) we have \( k = 12 \). Now consider \( M > N \), then if \( M \) is a multiple of \( N \) then \( k = 1 \). The case of \( M \) not being a multiple of \( N \) is similar to the earlier case when \( M, N \) were not relatively prime and can be handled similarly.

**Problem 3**
The signal \( x_k[n] = \sin(\omega_k n) \) for \( k = 1, 2, 4, 6 \) is shown in the following Fig. 8. As can be seen there are 3 unique signals. This can be seen easily by writing \( \sin(\omega_k n) \) for \( k = 6 \) as,

\[
\sin\left(\frac{2\pi 6}{5}\right) = \sin\left(\frac{2\pi (5 + 1)}{5}\right)
\]
\[
= \sin\left(2\pi + \frac{2\pi}{5}\right)
\]
\[
= \sin\left(\frac{2\pi}{5}\right)
\]
Figure 4: Problem 2. The signal $x_4[n]$

Figure 5: Problem 2. The signal $x_5[n]$

Figure 6: Problem 2. The signal $x_7[n]$

**Problem 4**
The plots for the three signals, $x_1[n], x_2[n],$ and $x_3[n]$ are shown in Figs. 9, 10, and 11 respectively.
It is easy to determine the period of the signals without MATLAB. Consider first the signal $x_1[n] = \sin(\frac{\pi n}{4})\cos(\frac{\pi n}{4})$, $\sin(\frac{\pi n}{4})\cos(\frac{\pi n}{4}) = \sin(\frac{\pi n}{4} + \frac{\pi n}{4}) + \sin(\frac{\pi n}{4} - \frac{\pi n}{4}) = \sin(\frac{\pi n}{2})$.  

It can be seen that the fundamental period of $\sin(\frac{\pi n}{4})$ is $N = 4$. 

---

Figure 7: Problem 2. The signal $x_{10}[n]$

Figure 8: Problem 3. The signal $x_k[n] = \sin(w_k n)$ for $k = 1, 2, 4, 6$

Figure 9: Problem 4. The signal $x_1[n] = \sin(\frac{\pi n}{4})\cos(\frac{\pi n}{4})$
Similarly $\cos^2(\frac{\pi n}{4})$ can be written as,

$$
\cos^2(\frac{\pi n}{4}) = \frac{1}{2} + \frac{1}{2} \cos(\frac{\pi n}{2}) = \sin(\frac{\pi n}{2})
$$

The fundamental period of $\cos(\frac{\pi n}{4})$ is $N = 4$.

Now consider $x_3[n] = \sin(\frac{\pi n}{4}) \cos(\frac{\pi n}{8})$,

$$
\sin\left(\frac{\pi n}{4}\right) \cos\left(\frac{\pi n}{8}\right) = \sin\left(\frac{\pi n}{4} + \frac{\pi n}{8}\right) + \sin\left(\frac{\pi n}{4} - \frac{\pi n}{8}\right)
\quad = \sin\left(\frac{3\pi n}{8}\right) + \sin\left(\frac{\pi n}{8}\right)
$$

Let us first look at $\sin\left(\frac{3\pi n}{8}\right)$. This will be periodic if

$$
\sin\left(\frac{3\pi (n + N)}{8}\right) = \sin\left(\frac{3\pi n}{8}\right)
$$

i.e,

$$
\frac{3\pi N}{8} = 2\pi k
$$

Hence the fundamental period $N_1 = 16$. Now look at $\sin\left(\frac{\pi n}{8}\right)$. This signal is periodic if

$$
\frac{\pi N}{8} = 2\pi k
$$
Hence the fundamental period signal for $\sin\left(\frac{\pi n}{8}\right)$ is $N_2 = 16$.
Hence the fundamental period of $x_3[n]$ is $N = 16$

**Problem 5**
The given signal $x[n]$ and the various shifted versions of $x[n]$ denoted by $y_k[n]$ are shown in the Figs. 12 and 13.
